Type Ia (SNID 35264248)
forced photometry
detection
FLUXCAL (AB zeropoint 27.5)
Thermonuclear disruption of a white dwarf -- radioactive ^{56}Ni decay powers a smooth rise and a slower, near-exponential decline.
Days since first detection
Type Ib/c (SNID 46704854)
Core collapse of a massive star stripped of its H (and, for Ic, He) envelope -- a smaller ejecta mass rises and declines faster than Ia.
Days since first detection
Type II (SNID 36031694)
Core collapse with the H envelope still attached -- hydrogen recombination holds the photosphere's brightness on a plateau before the radioactive tail.
Days since first detection
